Consulting engineering is changing...

Get the engineering support you need, when you need it.

Now you can get the engineering services you need regardless of your company's size. Scalable Engineering Services delivers the resources of a fully staffed engineering department—only when you need it. Smaller companies can pursue market opportunities otherwise out of reach. Larger companies can develop new products and technologies without adding to staff or facilities.

What we do

DHI provides design and product development from concept, prototype manufacturing, and testing. We also specialize in building supply chains. Our core team has more than 125 years of cumulative experience in a variety of engineering disciplines. In particular, we are experts in upper and lower completions technology.

Service Groups

DHI offers services in several major areas. You can "mix and match" these service groups to exactly suit your specific needs.

Technology Development

We take your ideas from concept to commercialization. It becomes your intellectual property. This is ideal for companies that may not have the expertise or resources to pursue market opportunities.

Technology Consultancy

Downhole Innovations brings immediate value to our clients by evaluating new concepts for products and technology along with an effective supply chain structure. You can expand into new product lines and fill gaps within existing product portfolios.

Application Engineering

This service is ideal for companies with internal design and development capability but without expertise in specific areas. Our application-specific engineers serve as product experts without bias to either operators or service companies.

Global Supply Chain

Developing a reliable supply chain for new products can be a company's biggest challenge with a new product in a new market. We've combined our domestic and overseas manufacturing resources with deep supply chain development experience to create a "supply chain in a box" concept. This concept uses proven methodology to quickly implement a supply chain for your particular needs.

Intellectual Property Reviews

DHI's in-house patent counsel reviews your intellectual property, advises a direction, and files patents on your behalf.

Quick Turn Manufacturing

We interface with you to identify and arrange the most efficient manufacturing resources for your needs. This service can result in significant savings in time and money.

Project Management

An essential key to success is project management by our experienced staff. And, when working with you, it is essential that you assign a project manager with authority to make decisions and to be intimately involved with the project, from the start. We succeed together, as a team.
