

Patent mapping project eliminates potential patent infringement problems for product development

Client can now enter new markets without the expense of patent challenges

Problem

A client saw a unique opportunity in an active market, with numerous participants. Before launching a design program, they needed to better understand the market and existing intellectual property surrounding this particular technology area.

Solution

Experienced DHI IP counsel performed a Patent Mapping Project, which included comprehensive intellectual property due diligence and thorough searches of U.S. Patent and Trademark Office records as well as a wide variety of publications.

More than three hundred patents were identified as having relevance to technology of interest to the client. DHI reviewed each of the individual patent claims and created and categorized the patents in groups so that the areas of interest could be referenced and better understood by the client.

Results

DHI helped the client navigate the IP and set a course for successful product design and development while eliminating the concerns of patent infringement.
